Description and Sources

Description

Formal Garden: A formal garden at Old Madeley Manor. The garden area has not been built over. <1> <2> <3>

A 16th century formal water garden, probably laid out for a member of the Offley Family as a setting for the mansion built by Thomas Offley on the site of the medieval manor. <4>

The house shown by antiquarian Robert Plot had a walled garden to the south and an outbuilding to the south-west. To the west of the house lies the remains of a water garden, probably of renaissance date, enclosed by a series of ponds and walkways. Two other ponds, which are thought to have been part of this scheme, lie to the south of the garden enclosure. The formal gardens shown by Plot adjoining the house to the south had principal walkways around the sides and through the centre, connected by a series of semi-circular paths. The principal walkways exist as low but reasonably well-defined scarps and form an enclosure circa 28 metres north to south by circa 45 metres east to west, with the southern side defined by another scarp. A number of subsidiary paths exist as extremely low scarps running parallel, and at right angles to, the remains of the principal walkways.

South-west of the ancillary building noted by Plot (which survives as a series of sandstone foundations to the south-west of the house and west of the garden) are a series of parallel mounds and channels. Their function is not entirely clear, being either garden features or associated with the later drainage of the area. On balance the latter suggestion seems more plausible, to help water down-slop into the moat and eventually the River Lea.

To the west of the moated enclosure area a series of features that form the remains of a formal Renaissance water garden. The area defined is similar to the manor house's moated enclosure, being almost 100 metres by 100 metres. The northern side of the garden is defined by a walkway which runs straight in an east to west direction, also forming the northern side of the moat. The average depth of the moat from the water's edge, which equates to the height of the walkway along this side, is 1.4 metres. The walkway is 160 metres long with a relatively level top and averages 6 metres wide. It is defined on its northern side by a ditch, averaging 10 metres wide and 1.6 metres deep and containing the River Lea. The river was canalised by the first quarter of the 19th century and its present course is shown on the Ordnance Survey 1st Edition 1" map. The straightness of its course at this point has led to suggestion, for which there is not evidence, that it follows the line of a Roman road.

Separating the moated enclosure from the gardens to the west is another walkway running in a north to south direction, at right angles to, and constructed at the same level as the walkway on the northern side of the garden. This walkway defines the western side of the moat, the depth of which (equating to the height of the walkway) is about 2 metres from the present surface at the southern end of the moat. South-west of the moat terminal, the eastern side of the walkway exists as a steep indented scarp with material mounded up along its edge, suggesting a number of phases of construction. The maximum height of this section of earthwork is 1.3 metres.

Running almost at right angles to north-south aligned walkway is another levelish area interpreted as a probable walkway defining the southern extent of the garden area. The sharpness of the scarp on the side of this walkway can be attributed to the drain that runs along the base of the slope. These two walkways surround a series of rectangular, steep-sided ponds, two on the eastern side and two on the southern side, which are bounded on their northern and western sides by two further walkways. These walkways are connected by causeways between the ponds, the two on the southern side appear to be original while that between the two ponds on the eastern side is a recent addition (though probably replaces an earlier causeway previously removed).

The present depth of the ponds on the eastern side is similar, both being circa 1.6 metres; the one to the north contains water while the southern pond is slightly marshy. The other ponds are dry, both are about a 1 to 1.2 metres deep from the top of the adjacent causeways. Both of the inner walkways are relatively level, one up to three metres wide, the other four metres. All the walkways widen, and surrounding the gardens are likely to have carried fences or hedges. It is unclear whether the hawthorns which principally line two of the walkways, formed part of a planting scheme, or whether they are later seedlings. The source of the material for these walkways are the ponds that bound them, together with the moat and the ditch which contains the River Lea.

The outer walkways surround a series of sub-rectangular platforms which formed the nucleus of a garden. These platforms are defined by channels that carried water, three running north-south, down-slope into a 0.70 metre deep channel that bounds the walkway on its own southern side, and by channels and drains running east to west. The platforms side in a series of level steps from north to south, matching the rise in the natural topography. The parterres to the west of the western channel are defined by an extremely low series of scarps. The depth of the central channel, equating to the height of the platforms, rises from 0.20 metres at the south to 0.60 metres at the north. It is evident that the channels dividing the platforms have been recut, and some probably realigned, after the gardens stopped being maintained when the manor house was vacated in the late 17th / early 18th century. It is therefore difficult to discern the original layout and isolate the changes in the planting scheme. At least two phases are apparent at the eastern end of the garden where a thin triangular platform, bounded on its eastern side by one of the north to south aligned channels, appears to be overlain by one of the inner walkways. The western scarp defining this walkway changes from a steep 0.70 metres high scarp at its northern end to an open 0.30 metre scarp towards the south, which maintains the levelness of the walkway as the natural topography rises. It is not clear what constituted the original western side of the garden. The present edge of this part of the site is the steep and straight sided north to south stream cut. Part of a brick structure at the western end of the east to west aligned walkway (on the northern side of the garden) is exposed in the stream cut and probably represents the remains of either a bridge or culvert. The bricks look to be post-17th century in date.

A level area immediately to the west of the east to west aligned walkway defining the southern extent of the garden, around which the stream is forced to deviate, is likely to have been part of the garden, perhaps the site of a building such as a summer house or temple or possible the site of a statue.

To enable such a water garden to function effectively it was essential that the water supply was regulated. To the south of the garden enclosure a valley, with a very pronounced fall on its eastern side, defines the remains of a pond which is now dry and clearly infilled on its western side. The southern extent of this pond has been destroyed by later activity in the valley bottom, while its northern side is defined by a dam, which appears to have been cut through by a later water channel. This pond was fed by a stream, now partially culverted. The pond provided a suitable head of water to maintain the flow through the gardens. It is likely that the water was carried by a series of channels, drains and culverts, which fed the ponds and the moat (which may have contained fish), as well as the channels that separate the platforms at the nucleus of the garden. The water then flowed out into the River Lea, either by means of culverts, indicated by linear depressions, most notably through the axial walkway on northern side of the garden, or into the channel west of the garden.

At the base of the valley, south of the moat and the garden enclosure there is a level rectangular area, thought to be a pond, that is defined on its southern side by the natural slope, to the north by the walkway defining the southern side of the garden, and by raised areas on its eastern and western sides. The position of the raised level area to the east, which coincides with the north to south alignment of the two extant ponds and may indicate that this pond also formed part of the garden layout. It was fed from the same source supplying the rest of the garden, and the water discharged by means of a channel, now partly occupied by later drains, which runs past and defines the southern side of the southern walkway and the gardens south of the house defined by a scarp. (SB, 09-May-2017) <5> <6>

PRN Number	Site Name	Record Type
02600 - MST2590	Whitmore (Shrunken Village)	Place

A settlement recorded in the Domesday survey of 1086 as having three villagers and two smallholders with one plough. A 16th century map seems to suggest that the settlement was once more extensive to the west of Whitmore Hall and the main road than it is today.

Summary from record 03902:

A significant placename, suggesting the possible location of a site or settlement of possible Saxon origin.

Monument Types and Dates

SHRUNKEN VILLAGE (SAXON - 410 AD to 1065 AD)

Evidence	DOCUMENTARY EVIDENCE
Evidence	EARTHWORK
Evidence	PLACENAME EVIDENCE

Description and Sources

Description

Significant Placename: Whitmore meaning 'White Marsh'. <1>

Three villagers and two smallholders with land for one plough are recorded at Whitmore in Domesday. <2>

Shrunken Settlement: A copy of a 16th century map shows settlement extending along the road to the west of the present park. <3>

PRN Number	Site Name	Record Type
03739 - MST3510	Lake / Millpond, Whitmore Hall Park	Monument

A lake (interpreted as a mill pond from Yates map) at Whitmore Hall Park, thought to have been created around 1756. The lake is very much in the style of Capability Brown, although there is no real evidence to suggest that he worked at Whitmore.

Monument Types and Dates

LAKE (Constructed, (Circa) Georgian - 1756 AD)

Evidence EARTHWORK

(Alternate Type) MILL POND? (Constructed, (Circa) Georgian - 1756 AD?)

Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

Mill Pond: A mill pond is shown here on William Yates' map of 1775. <1>

A lake was established had been established by 1775 and it was suggested that the lake may have been created by diverting the stream running through the park, however this is unlikely to be the case as a 16th century map shows the stream following its present course. The style of the lake is like that of Capability Brown, although there is no evidence of him having worked at Whitmore. The lake is thought to have been created in around 1756. (SB, 15-Dec-2005) <2>

Description and Sources

Description

Ridge and Furrow / Trackway / Linear Feature: Earthwork system of trackways and field boundaries, identified from aerial photography. <1> <2> <3>

The ridge and furrow, trackways and linear features survive fossilised within an area converted to parkland in the 16th century, represent significant traces of a 12th-13th century field system, referred to as 'Holtefilde' and later 'Hallfield'. A site walk-over survey in 1994 failed to observe any surviving earthwork remains. <5>

07011 - MST5105	Church of Saint Mary and All Saints, Whitmore	Building

A listed church which is largely made up of 12th century fabric, remodelled in the 17th century before being thoroughly restored and slightly extended circa 1880. The large churchyard is separated from the avenue of trees that lead to Whitmore Hall by a ha-ha.

Monument Types and Dates

CHURCH (SAXON - 650 AD to 1065 AD)
Evidence CONJECTURAL EVIDENCE
Evidence DOCUMENTARY EVIDENCE?
CHURCH (Built, (at some time) Norman - 1100 AD to 1199 AD)
Evidence EXTANT BUILDING

Description and Sources

Description

Church: A church of supposedly pre-conquest foundation. The extant church contains Norman fabric and a timber framed tower. It was altered in the 19th century. The associated churchyard may also have early medieval origins. <1> <2>

Description and Sources

Description

Landscape Park in the area around Whitmore Hall. Not built over on modern Ordnance Survey Map. <1> <2>

The grounds of Whitmore Hall cover almost 53 hectares, comprising of circa 44 hectares of parkland and 8 hectares of gardens. Features within the park and gardens include a lake, cascade, small summer house, and a family pets graveyard. The gardens are in the style of Capability Brown, and contain fine examples of trees, including a lime avenue leading to St. Mary's and All Saints Church. (SB, 09-Dec-2005) <3>

The manor of Whitmore has been in the Mainwaring family since the 16th century, only changing hands through inheritance. 16th century map evidence suggests that the layout for the garden is almost entirely different to how it appears today. For example, the avenue or walk linking the church to the hall is shown with a dog-leg and a number of semi-circular areas (presumably providing views of the gardens), however since the late 19th century (at least it has existed as a straight, tree-lined avenue. The early map also shows a series of water features to the south and east side of the house, the only one of which to survive from the 16th century appears to be the Lily Pond. A small pond to the west of the lily pond was in-filled and replaced by a formal rose garden (possibly around 1840). The road across the park (what is now the modern A53) was built in 1804, and sunk into a cutting so that it was not visible from the main house. (SB, 15-Dec-2005) <4>

Description and Sources

Description

Landscape Park: Henry II gave the estate to the Knights Templar in 1168-1169. After the order was condemned the estate was held by Thomas, Earl of Lancaster. It was granted to the Hospitallers in 1324 and later passed to the Sneyds. It is now developed as a university campus. <1>

It is designated on the Register of Historic Parks and Gardens, although the registered area does not cover the original full extent of the park. <2> <3>

A plan of intended improvements by landscape architect William Emes (dated 1769) depicts a stream running across the demesne north-west to south-east through a series of fishponds, including one due east of the hall (which is not identified by name). A map of 1828-1830 shows a fishpond and woodland belt to the north-east of the hall.

The main part of the landscape park was laid out in the mid 18th century and improved in the mid 19th century. The last remaining strips of common land in 'Hallfield' were enclosed in 1749 and by circa 1847 the park had been extended almost to the centre of the village of Keele.

At the outbreak of World War II Keele Hall was requisitioned by the military. A transit camp was built in the park and later in the war the US Army was stationed there. After the war the base served as a refugee transit camp and almost 100 huts of various kinds and two large triple NAAFI units were erected in the grounds, 48 of which were ultimately converted to student accommodation (including a group in the vicinity of what is now Horwood Hall). When Keele Hall was purchased by the University College of North Staffordshire in 1949 it made use of many of the hutments right through until the 1970s. (SB, 24-Feb-2010) <4>

The listed ruins of a probable 16th century manor house, which was constructed of coursed red sandstone, only two parts of which are upstanding. An archaeological watching brief in 2004 revealed evidence for further remains of the manor below ground.

Monument Types and Dates

MANOR HOUSE (POST MEDIEVAL - 1540 AD to 1699 AD)

Evidence RUINED BUILDING

Description and Sources

Description

The ruins of a large manor house, which belonged to the Swynnerton Family and dates from 1540, survives within the grounds of Park Hall. The ruin comprises of two lengths of sandstone wall joined at right-angles and surviving to two storeys high. An archaeological watching brief in April 2004 indicated that further remains of the manor house, including brick and stone foundations and hardstanding indicating the possible location of a path or driveway, survive beneath the modern ground surface. Finds recovered during the watching brief included a 19th/20th century pottery scatter, a 16th century coin and a 17th century clay pipe fragment. (SB, 24-May-2004) <1>

Description and Sources

Description

The original 'Seabridge-Butterton' stretch of the Newcastle to Drayton road. The modern road runs west of Seabridge, down Whitmore Road, while the original road ran through Seabridge, along what is now called Harrowby Drive. It continues past Seabridge Hall and through Butterton and Acton, where it rejoins the current route at Whitmore, towards Market Drayton. This original route is shown on Yates' 1775 map. (SW, 14-01-2009) <1>

The road is mentioned in 1483, when Thomas Swynnerton of Butterton was fined for stopping it up. Its present route was formed in the 1830s or 1840s and is shown on the 1830s map. (SW, 14-01-2009) <2> <3>

Part of the old road survives as a hollow way on the 1st edition 1880s map, just east of Seabridge Hall. (SW, 14-01-2009) <4>

The Stoke, Silverdale and Market Drayton Branch of the North Staffordshire Railway, the route of which is plotted on the 1st Edition Ordnance Survey maps. The line was established in the mid 19th century and the route is still partially extant.

Monument Types and Dates

RAILWAY (Established, (between) Victorian - 1846 AD to 1870 AD)
Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

The Stoke, Silverdale and Market Drayton Branch of the North Staffordshire Railway, the route of which is plotted on the 1st Edition Ordnance Survey maps. (SB, 20-Apr-2012) <1>

Construction work on the North Staffordshire Railway began in September 1846. (SB, 20-Apr-2012) <2>

The Silverdale and Newcastle Railway was leased to the North Staffordshire Railway by Ralph Sneyd on 31 August 1860 under a 999 year lease. The line to Knutton Junction opened to goods traffic in September 1952 and to passengers in May 1863 while the passenger and goods section from Silverdale to Market Drayton was opened in February 1870. (SB, 20-Apr-2012) <3>

The course of the railway survives in places, however in the Newcastle area has been lost to redevelopment. (SB, 20-Apr-2012) <4> <5>

PRN Number	Site Name	Record Type
54832 - MST18601	Water Meadow, South-West of Seabridge, Newcastle under Lyme	Monument

The earthwork remains of a water meadow system identified on aerial photography from 1963 to the south-west of Seabridge, Newcastle under Lyme. The M6 has since been constructed over much of the water meadow.

Monument Types and Dates

WATER MEADOW (POST MEDIEVAL - 1486 AD to 1799 AD)

Evidence DOCUMENTARY EVIDENCE

Evidence LEVELLED EARTHWORK?

(Former Type) RIDGE AND FURROW (MEDIEVAL - 1066 AD to 1485 AD)

Evidence LEVELLED EARTHWORK?

Description and Sources

Description

A water meadow identified on aerial photography from 1963, at which time between 10% to 50% of upstanding earthworks and carriers survived over the total area of the meadow. The extent of the survival of the water meadow system was unclear on aerial photography from 2000. (DAT, 03/08/2012) <1>

Earthworks within a small area of the northern part of the water meadow system had previously been interpreted (from 1963 aerial photographs) as ridge and furrow (PRN 04716). Aerial photographs from 2000 and 2006 show that the M6 motorway had been constructed across the centre of the water meadow system. (DAT, 03/08/2012) <2> <3>

Description and Sources

Description

A farmstead on the edge of the hamlet of Baldwin's Gate. The farmstead was originally laid out around a regular courtyard with main L-plan range and additional detached range forming the third side of the yard. (HP, 28-Apr-2014) <1>

The farmstead may be depicted on the (circa) 1830s 1" Ordnance Survey map, indicating that it was probably established by at least the early 19th century. (HP, 28-Apr-2014) <2>

The farmstead is still extant, although with large-scale modern agricultural buildings now added to the north. (HP, 28-Apr-2014) <3>

LOOSE COURTYARD PLAN (ONE SIDED) (Established, (between) POST MEDIEVAL to Georgian - 1700 AD? to 1774 AD)

Evidence	DOCUMENTARY EVIDENCE
Evidence	EXTANT BUILDING

Description and Sources

Description

A small farmstead identified as originally having a loose courtyard plan form with working buildings to one side of the yard. The farmhouse is detached, but in line with the working buildings. The complex has been altered with additions to both the working buildings and the farmhouse. (DAT, 06/07/2016) <1>

The farmstead is indicated on the mid-19th century 1" OS map and a property is shown at this location on Yates' map of 1775 suggesting that the complex may have existed by this date. (DAT, 06/07/2016) <2><3>
